ST60 Additional Service Clarifications

ST60 Storage for Services is replicated offsite to non SSD based ARRAYS.

The ST60 storage rate does not include any backups for fiber-connected servers or VM-connected servers. COT's server administration team will configure backups at the request of the client.

The ST60 offering is suitable for high availability storage needs, as well as applications utilizing enterprise data and databases such as SQL Server, Oracle & DB2.

Enterprise Server (i.e. z/OS mainframe) storage is provided under the ST10 offering and is not available as ST60.

COT oversees all changes to the enterprise via the Change Management process. Non-scheduled and/or emergency changes require Emergency Change Management approval. In addition, COT reserves the right to bill the agency for COT personnel time associated with emergency changes.
